

# **The OSIRIS ECPR trial**

**Out-of-hospital refractory cardiac arrest treated with  
extracorporeal cardiopulmonary resuscitation**

## **The OSIRIS registry**

**An integral part of the OSIRIS project will build a large multicentre international database to further study specific topics that could not be fully addressed in the RCT environment. The aim of the database is to improve benchmarking and collaboration between European centres as well as treatment and outcomes in the refractory OHCA population. Such a database will also address the great need for harmonizing currently fragmented databases of European centres and will gather large patient datasets to perform unique analyses that will improve scientific knowledge.**

## **Investigators meeting - OSIRIS registry**

**21–Oct–2023**

**9:00-12:00**

**Panorama hotel**

### **Agenda:**

- 1. Welcome**
- 2. Consortium introduction and project status**
- 3. RCT protocol summary**
- 4. OSIRIS registry, multicentre international database**
- 5. Discussion**
